# Train-the-Trainer on Creative Commons Licenses (CC-licenses) and the Open Data Commons Open Database License (ODbL) - Train-the-Trainer evaluation

## Spørgsmål 1:

### Event organisation and venue ( logistics, food etc.)

ⓘ 8 af 24 har svaret på dette spørgsmål

This Event is administered by Conference Manager™

## Spørgsmål 5:

### Overall evaluation of the training

> ⓘ 8 af 24 har svaret på dette spørgsmål

| Mest valgt | 1 | 2 | 3 | 4 | 5 |
|---|---|---|---|---|---|
| Rating on a scale from 1 (poor) to 5 (excellent) | 0 | 1 | 1 | 3 | 3 |

## Spørgsmål 6:

### 1. Which aspects of the event did you feel could be improved?

> ⓘ 4 af 24 har svaret på dette spørgsmål

**Fritekst besvarelser:**

**1** 1) The presenter should have organised the presentation in sections and asked people to write down questions to be answered after each section, 2) Slide layout could be improved to enchance overview.

**2** Perhaps use mike next time

**3** The training seemed a bit too focused on making business sense out of open data. However for a University, we often have no choice in the data we open, but are required by granting agencies to open our data. It would have been nice to have a bit more focus on the University specific challenges.

Also, the discussion of the two licenses did not really help to make it clear what the best option is. For example, it seems that since Creative Commons can cover both content and the database, there is little need for the ODbL license. It would have been good to have some concrete examples of when the ODbL license would be preferable.

Finally, there was a lot of discussion around the idea that "data", which I think means individual data points do not have IP protection. However, I think it is more common to talk about data as "data sets", which it seems at least in the EU do have IP protection. This took a lot of discussion time, and at least to me did not seem to really be important for understanding the licenses.

**4** More practical information on how you go about adding a license to your dataset - if you deposit your data in a place that does not come with a license option.

## Spørgsmål 7:

### 2. What future training courses or support materials would you like to see?

> ⓘ 4 af 24 har svaret på dette spørgsmål

**Fritekst besvarelser:**

**1** Support material in the form of a short and simple overview of the licenses, outlining which use cases they are most suited in a research context specifically. The challenge is to understand the implications of the choices.

**2** More discussions like this. More on DTU policy and mandates

**3** * Training on how to sustainably open our data
* What is the role of researchers / project managers vs the University in ensuring data is available after a project ends
* Review of how to include data in repositories, not just metadata, and what data repositories are available
* Further discussion around the idea of "attribution" and "Share-A-Like" licenses and what they mean for University released data.

**4** Tackling data ownership/rights & how to communicate this topic to the researchers.
Open Research; challenges and possibilities for research.

## Spørgsmål 8:

### 3. If you have any additional comments you can add them here:

> ⓘ 3 af 24 har svaret på dette spørgsmål

This Event is administered by Conference Manager™

**Fritekst besvarelser:**

**1** While I didn't find this particular training very useful, I think the idea of having training around how we open data is very important, and hope that you will continue to offer such sessions.

**2** I answered 3 "neutral" for the material shared during/after the event, because I have not recveive any material so far.
The presentation was excellent!!!!!

**3** Great event!
